

ABSTRACT OF THE DISCLOSURE

In order to provide a recording tape cartridge which always can be piled up stably while a region for a label can be secured, there is provided a recording tape cartridge comprising a case having a substantially boxed shape and rotatably accommodating a reel around which a recording tape is wound, a recessed portion formed on an upper surface of the case, and a stacking rib protrudingly provided on a lower surface of the case, for engaging with the recessed portion when a plurality of the recording tape cartridges is stacked, a protruding portion, which defines a label region, being formed at a position in the recessed portion, which position does not interfere with the stacking rib when the plurality of the recording tape cartridges is stacked.
